Leadership as an Enabler of Innovation Climate and Innovative Work Behavior in Indonesia's Public Libraries

Dyah Puspitasari Srirahayu[a], Ahmad Rizki Sridadi[b], and Dian Ekowati[b]

[a]Library Study, Faculty of Vocational Studies, Universitas Airlangga, Surabaya, Indonesia; [b]Management Department, Faculty of Economics and Business, Universitas Airlangga, Surabaya, Indonesia

ABSTRACT

Organizations play an important role in the continuity of a good work environment. This study aims to determine the types of leadership influence the innovative behavior of librarians in public libraries and innovation climate influences the innovative behavior of librarians in public libraries. This study using qualitative methods and was conducted in several public libraries in Indonesia. The respondents are the librarian in Malang City public Library, Gunung Kidul public Library, and Yogyakarta Special Region public Library. The research found that transformational leadership impact to librarian innovative behavior and innovation climate in Indonesia's public library.

ARTICLE HISTORY

KEYWORDS
Public library; librarian; leadership; innovative work behavior; innovation

Introduction

Researchers have affirmed that innovation has a pivotal role within an organization to maintain an edge in a competitive environment and long-term viability (Iqbal et al. 2020; Janssen 2004; Oldham and Cummings 1996; Scott and Bruce 1994). Through innovation, organizations are expected to unceasingly improve their products and services to outperform their competitors. New ideas are known to lead to innovations, despite so, the execution is determined by the management of the organizations and the individuals within (Janssen 2000; Scott and Bruce 1994; Stoffers, Neessen, and van Dorp 2015). Scott and Bruce (1994) do not specifically define innovation, but refer to it as something greater and beyond creativity, with differentiation as its sole essence. They claim that creativity is the ability to generate ideas, whereas innovation is concerned with the creation or adoption of useful ideas and their implementation. As a result, innovation requires new knowledge and novelty along with the process of reworking a product and implementing it in a tangible way.

Libraries, including institutions or organizations that provide various sources of knowledge, also require innovation. Zaid and Oyelude (2012) revealed that there have been important developments in libraries and information services, however, it is not followed by creativity and innovation. In regards to this, Innovation in libraries is required as it deals with the process of developing library services that are adjusted to the users' needs, such as offering new services or technological innovations that combine digitalization and the recent information-searching behavior by users (Yeh and Walter 2016).

The information explosion that occurred in the digital age has resulted in innovation throughout library operations, one of which focuses on the services for users. Library services can now be accessed not only directly by physically visiting the library, but also remotely. As a result, since the library can also be accessed through the internet, users are vulnerable to choosing other unreliable information sources aside from the library website. This can ultimately threaten the function of libraries and librarians. One of the innovative solutions offered to this is developing an adequate and property functioning digital library services (Calhoun 2014). The growing existence of digital library services leads to the increase of service requests from library users, such as the requests for information and answering questions about the library and its collection. Hence, librarians today have provided online reference services to search and access literature, telephone reference services, and are open to users' e-mails. Libraries have also utilize blogs or websites that have become a means for interactive communication platform between librarians and users (Chunli and Jinmin 2011).

Innovations in libraries are mostly contribute by the librarians. Innovative librarians are able to explore, implement, and find new ways to change the systems. This further impact new ways of services. The innovation of librarians in creating and realizing new services is a conscious and planned activity to create competition between libraries, and guarantee user satisfaction by maintaining standards and benchmarks through accountability. The quality of services and information can only be guaranteed by innovative services created by Librarians (Rath 2018). Therefore, innovation from the librarians is needed to maintain the library, especially in regards to user satisfaction (Abubakar and Attahir 2018).

In Indonesia, the pandemic caused by the COVID-19 directly impacted library services. The government's policy on Large-Scale Social Restrictions (PSBB, *Pembatasan Sosial Berskala Besar*), then the Enforcement of Restrictions on Community Activities (PPKM, *Pemberlakuan Pembatasan Kegiatan Masyarakat*), followed by the implementation of a "New Normal" drove libraries to limit and even eliminate face-to-face services. Libraries as a public place to access information must certainly make a breakthrough in innovation and adjust to the government policy. Librarians as human resources in libraries are required to be innovative in keeping up with

changing times to maintain the use and function of libraries in any situation and condition. Susilowati (2021) describes the recent innovations that librarians must make, including: 1. Service innovation; 2. Innovation in terms of collection development; and 3. Human resource innovation. Furthermore, Fauzi, Prastiti, and Titiswari (2021) revealed concrete examples of innovation in libraries, namely; 1. Providing an online book borrowing system; 2. Registering members online; 3. Providing live chat applications on the Library's website; 4. Providing a collection of e-books through digital stores such as Google Playstore; 5. Conduct webinars and online discussions.

The drive to make innovation inherent in each individual is known as Innovative Work Behavior (IWB). Today, all modern organizations including libraries face similar challenges: the multicultural and prospective problems as a result of globalization and technological disruption. IWB is necessary for all organizations as it may equip them with a competitive advantage in today's global competition, and to advance in the current era of struggle (Jung, Chow, and Wu 2003). For organizations, IWB is needed to generate new ideas, which in turn improve organizational performance (Odoardi et al. 2015). Jung, Chow, and Wu (2003) revealed that in modern organizations, IWB is determined by effective leadership (Jung, Chow, and Wu 2003) and also the organizational climate (Soken and Barnes 2014). Kermani and Solhdoost (2017) suggest that there is a significant relationship between the innovative behavior of librarians and the innovation climate.

Research by Gächter and Renner (2018) shows that actions taken by leaders have the greatest direct impact on influencing employee behavior. Innovative leaders are one of the strategies in responding to problems in processes and development in society (Ode, Sirotus, & Simanulang, 2022). Leaders who can develop ideas, combine ideas, and act as catalysts in implementing their innovations can also increase enthusiasm and motivation for employees to follow the example of their leaders (Jaudi 2020). The actions and words of leaders can indicate invitations and appreciation for the contributions of their employees (Nembhard and Edmondson 2006). Transformational Leadership focuses on employees by setting examples, teaching and training them so that leaders don't just give orders, but provide examples of innovative actions to their employees, both directly and implicitly (Qi et al. 2019).

A large number of studies have found the dominant role of organizational climate in stimulating employee innovative work behavior significantly (Balkar 2015; Shanker et al. 2017). Organizational climate is a relatively enduring characteristic of an organization that distinguishes it from other organizations and which reflects the prevalent norms, values and attitudes of the organizational culture (Carlucci, Mura, and Schiuma 2020). Organizational climate also represents organizational expectations for behavior and potential outcomes of behavior (Carlucci, Mura, and Schiuma 2020). Referring to innovative work behavior, if employees feel

a climate that values problem-solving behavior, is open to experimentation, tolerates failure and supports risk-taking, employees become more persistent, creative and helpful when facing unexpected problems (Wolf, Kaudela-Baum, and Meissner 2012); Munir and Beh (2019). In addition, when organizations have a cooperative climate, individuals are more likely to work together, share and develop tacit knowledge, generate new knowledge and promote each other's performance and learning, by creating opportunities for the development of innovative work behaviors (Bock et al. 2005).

From previous studies it is known that leadership and organizational climate have an influence on innovative work behavior of employees. Leadership and organizational climate can stimulate and increase innovative work behavior. However, this research topic has never chosen a library as a research location. During this research on innovative work behavior in libraries related to the entrepreneurial character of librarians (Sa'ari et al. 2018); work engagement (Peng 2020); librarian information literacy (Middleton and Hall 2021) which influences innovative work behavior. Therefore this study aims to examine the relationship between leadership, organizational climate and innovative behavior of general librarians.

Research Problem Formulation:

1. Is leadership influence the innovative behavior of librarians in public libraries?

Literature review

Innovative work behavior (IWB)

Innovative Work Behavior (IWB) is defined as all deliberate individual actions to develop new ideas useful for the creation of products, services, and processes (Na-Nan and Arunyaphum 2021) directed at the generation, introduction, and application of useful novelty at every level of the organization (Kleysen and Street 2001). IWB benefits not only organizations, but also nations, the world, and industry (Patterson et al. 2009). IWB is considered to be very complex because producing ideas that are practical, new, proactive, and realistic is not easy (Yuan and Woodman 2010). There are two stages of IWB, namely creation and implementation. Creation is initially exploratory, while implementation consists of conceptual and application enrichment. Conceptual enrichment requires sharing ideas and improving initial concepts, moving from abstract to practical. Such application executes developed concepts into reality by creating prototypes. Hence, IWB is seen as important for companies to build and maintain a competitive position in their chosen market (Na-Nan and Arunyaphum 2021).

IWB in the workplace as a complex behavior has three dimensions, namely idea generation or creation, idea promotion, and idea realization (Janssen 2000, 2004; Scott and Bruce 1994; Yuan and Woodman 2010). It is interpreted by De Jong and Den Hartog (2010) that IWB refers to a variety of behaviors related to developing ideas, and gaining support to ensure their implementation. Clarke and Higgs (2020) also describes it as follows: 1. Creating new ideas to handle complex issues (idea generation); 2. Searching for new methods, techniques, or work instruments (idea generation). 3. Generating original solutions to problems (idea generation); 4. Mobilizing support for innovative ideas (idea promotion); 5. Gaining approval for innovative ideas (idea promotion); 6 Making core organizational members enthusiastic toward innovative ideas (idea promotion); 7. Transforming innovative ideas into useful applications (idea realization); 8. Introduce innovative ideas into the work environment systematically (idea realization); 9. Evaluate the usefulness of innovative ideas (idea realization). At any given point in time, different individuals may be at different stages in this process (Scott and Bruce 1994).

Transformational leadership (TL)

Transformational Leadership (TL) was first introduced by Downton (1973) and later developed by Burns (1978) as an important approach to leadership in a political context. According to Burns (1978) TL can be observed when leaders and members encourage each other to raise morale and motivation to a higher level. TL is also applied in the context of organization by Bass and Avolio (1994a) which illustrates that leaders and members have the opportunity to exchange ideas and reach each other bilaterally at the top level. In other words, TL is also defined as the role of a proactive leader who acts as a driver of change, increases member awareness to behave innovatively, and supports members to achieve goals (Busari et al. 2019; Islam, Furuoka, and Idris 2021).

TL is modeled by Bass et al. (2003) into four dimensions consisting of: 1. Idealized Influence (II) which refers to leaders who are admired, respected, and exemplified by their members; 2. Inspirational Motivation (IM) describes leaders who are able to create a sense of enthusiasm for members to do their tasks and generate members' confidence in the ability to complete tasks to achieve goals; 3. Intellectual Stimulation (IS) describes leaders who encourage members to forget the old, no longer relevant way of working so as to create a new method that is more efficient; 4. Individualized Consideration (IC) emphasizes leaders who pay attention to the character, needs, and abilities of members in regards to what they need to execute.

Innovation climate (IC)

Innovation Climate (IC) is defined as the act of sharing perceptions among members regarding values, politics, practices, procedures, and rules which

may encourage members' behavior in creating new information and implementations (Ibrahim, Wan Mohamad, and Shah 2018; Moolenaar, Daly, and Sleegers 2010). In general, this activity can be said to be a driver of change, innovation, and organizational effectiveness (Daellenbach, McCarthy, and Schoenecker 2002). Mumford et al. (2002) revealed that ICs are able to influence new ideas in organizations and their actions. Within an organization, a strong innovative climate plays an important role in the creation of new ideas. When driven with enthusiasm, members would go hand in hand in making them happen. According to Buckler and Zien (1996) thinking outside the box is the main characteristic of an innovative environment.

IC is categorized into four dimensions, namely: management practices, organizational motivation, resources, and results (Amabile, Burnside, and Gryskiewicz 1999). Furthermore, Gendi and Clark (2018) identified twenty-one dimensions of ICs which are also categorized into four main dimensions, namely: 1. Leadership for innovation; 2. Organizational support for innovation; 3. Organizational structure; 4. Practice of human resources. Gendi and Clark (2018) also explained that although members have the ability to be innovative, their willingness depends on the organizational climate for innovation because in realizing or implementing new ideas successfully, supportive policies, practices, and procedures are needed.

Transformational leadership and innovative work behavior

Transformational leadership is defined as a process in which leaders function as ideal role models, stimulate and encourage innovative work behavior, provide inspirational motivation, and support and guide members to achieve the vision and common goals of the organization (Afsar and Umrani 2020b; Bass and Avolio 1994b). Leaders are able to articulate the vision of the organization in individual goals, thereby increasing the inspiration and motivation of members (Bednall et al. 2018). Bass and Avolio (1994b) revealed transformational leaders have a positive influence in the innovation of an organization.

Transformational leaders can mobilize employees to pursue the vision of the organization with passion. This effect is achieved through intellectual stimulation, emotional attraction, and inspiration from leaders as well as investment goals that look vibrant, lively, interesting and real (Zuraik and Kelly 2019). TL is able to encourage employees toward innovative behavior (IWB) and provide a supportive environment (Bednall et al. 2018; Scott and Bruce 1994). Relating to this, supportive environment effectively increases employees' motivation to engage in creating and implementing new ideas as well as providing support and feedback in the search toward innovative and optimal solutions (Tse, To, and Chiu 2018; Wang et al. 2013). Based on this explanation, a hypothesis is formed:

H1: Transformational Leadership has a positive effect on Innovative Work Behavior

Transformational leadership and innovation climate

Transformational leadership influence the adoption of generative thinking and the pursuit of organizational innovation. A recurring theme in the literature is that internal factors other than leadership itself, such as organizational culture and structure, can have an impact on organizational innovation. Further research made suggestion about transformational leadership and its impacts on the innovation climate (Zuraik and Kelly 2018). Transformational leadership is very likely to implement advanced technologies and practices, and can direct members to take environmental change as an opportunity for innovation (Zhang, Zheng, and Darko 2018). Zuraik and Kelly (2018) conducted a study toward 215 company CEOs in the United States and found that their transformational leadership encourages innovation climate among employees. Based on this explanation, a hypothesis is formed:

H2: Transformational Leadership has a positive effect on Innovation Climate

Innovation climate and innovative work behavior

Certain human resource practices may have a greater impact on IWB when provided in environments that are considered innovative and risk-taking friendly. Supervisors play an important role in facilitating innovative work behavior in an organization, namely by outlining a role in encouraging innovative climate (Bos-Nehles and Veenendaal 2017). Innovative climate has a positive Relations with individuals and organizations (Newman et al. 2019; Ruiz-Moreno, Tamayo-Torres, and García-Morales 2015; Übius, Alas, and Elenurm 2013). Previous research has also revealed that the innovative climate of the organization is pivotal in encouraging innovative behavior of individuals, this leads to a positive impact on organizational effectiveness (Scott and Bruce 1994), especially in the business environment (Pieterse et al. 2010).

Innovative climates allow employees to develop new mechanisms and improve work-related processes (King et al. 2007). In addition, the innovative climate can also support creativity and innovative work behavior (IWB) in employees, as well as efforts to explore and implement new ideas throughout the business (Ali and Park 2016; Park and Jo 2018; Wang et al. 2013). Therefore, companies must have an innovative climate that not only empowers their employees but is also able to stimulate employees to be innovative (Mehmood, Jian, and Waheed 2019). Based on this explanation, a hypothesis is formed:

H3: Innovation Climate has a positive effect on Innovative Work Behavior

Transformational leadership and innovative work behavior through innovation climate

Organizational climate influences innovation as it is one of the organizational factors. It has also been emphasized that the organizational climate must include certain characteristics, such as team cohesion, supervisor support, and autonomy, to encourage innovative employee work behavior (Sönmez and Yıldırım 2018). According to an empirical study, a supportive innovation climate enhances IWB among employees by encouraging acceptance of new ideas and proactively enhancing the exploration of new opportunities. Due to the breadth of the concept of innovation climate, very few studies have addressed cross-level issues, such as whether group climate motivates innovative work behavior at the individual level (Afsar and Umrani 2020a, ; Kheng and Mahmood 2013). When an organization fosters a culture of innovation and risk-taking, employees feel empowered and see their success as a result of their participation in innovative activities on their own initiative (Afsar, Badir, and Saeed 2014).

The effect of transformational leadership and innovation climate on IWB is also thought to be influenced by control variables, namely area of origin and tenure. An organizational culture is often affected by the regional culture in which the organization is located. Research conducted by Li (2019) and Phil-Thingvad and Klausen (2020) provide evidence that organizational culture influences innovative behavior. Research conducted by Phil-Thingvad and Klausen (and Jaudi 2020), Carlucci, Mura, Schiuma (2020), and Gkorezis (2016 showed that tenure had an effect on innovative behavior of employees, but research conducted by Mura, Lettieri, Spiller, Radaelli (2012) obtained different results. Based on this explanation, the following hypotheses are formed:

H4: Innovation Climate mediates the relationship between Transformational Leadership and Innovative Work Behavior

H5: Origin mediate the relationship between Transformational Leadership and Innovative Work Behavior

H6: Tenure mediate the relationship between Transformational Leadership and Innovative Work Behavior

H7: Origin mediate the relationship between Innovation Climate and Innovative Work Behavior

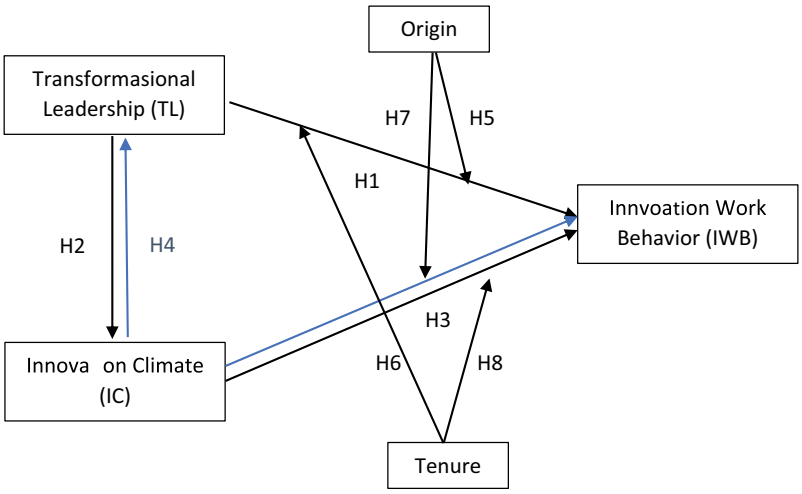

Figure 1. Conceptual model.

H8: Tenure mediate the relationship between Innovation Climate and Innovative Work Behavior

Figure 1 shows the conceptual data model that will be used in the research.

The hypotheses of this research are

H1: *Transformational Leadership has a positive effect on Innovative Work Behavior*

H2: *Transformational Leadership has a positive effect on Innovation Climate*

H3: *Innovation Climate has a positive effect on Innovative Work Behavior*

H4: *Innovation Climate mediates the relationship between Transformational Leadership and Innovative Work Behavior*

H5: *Origin mediate the relationship between Transformational Leadership and Innovative Work Behavior*

H6: *Tenure mediate the relationship between Transformational Leadership and Innovative Work Behavior*

H7: *Origin mediate the relationship between Innovation Climate and Innovative Work Behavior*

H8: *Tenure mediate the relationship between Innovation Climate and Innovative Work Behavior*

Research methods

Quantitative research methods are used to determine the real effect of Transformational Leadership (TL) and Innovation Climate (IC) on Innovative Work Behavior (IWB) in precise calculations. This study is confirmatory, where researchers seek to recognize the relationship between independent variables, mediators, controls, and dependents. The purpose of confirmatory analysis is to test whether the data match the measurement model (Gatignon 2013).

The population in this study are public library librarians in Indonesia who were selected based on innovation achievements that could be recognized at the national level. There are 3 (three) public libraries that are recognized by the Indonesian Government due to their achievements in terms of innovations, namely the Malang Public Library, Gunung Kidul Public Library, and Yogyakarta Public Library. This study used a saturation sampling strategy, where all members of the population were included in the study sample (Monoarfa 2018). Data collection was carried out by converting the questionnaire into Google Forms to librarians and distributing it through WhatsApp (WA). The questionnaire became the core of this study as it applied a quantitative method. The analysis method used in this study is Structural Equation Modeling Partial Least Square (SEM PLS) analysis using the smart PLS 3.0 program through direct and indirect path coefficients.

Results

The analysis of research results in the outer model is divided into two tests, namely validity and reliability testing. Validity testing can be done through AVE (Average Variance Extracted) results. The Average Variance Extracted (AVE) score on each construct is used to assess convergent validity with a minimum limit of 0,500. Based on Table 1, it can be seen that all AVE

Table 1. Validity test.

	Average Variance Extracted (AVE)
Innovation Climate	0.767
*Innovation Climate*Origin*	1.000
*Innovation Climate*Tenure*	1.000
Innovative Work Behavior	0.737
Transformational Leadership	0.733
*Transformational Leadership*Origin*	1.000
*Transformational Leadership*Tenure*	1.000
Origin	1.000
Tenure	1.000

Source: Output SmartPLS 3.0 (2023).

Table 2. Reliability test.

	Cronbach's Alpha	Reliabilitas Komposit
Innovation Climate	0.923	0.942
*Innovation Climate*Origin*	1.000	1.000
*Innovation Climate*Tenure*	1.000	1.000
Innovative Work Behavior	0.949	0.957
Transformational Leadership	0.954	0.961
*Transformational Leadership*Origin*	1.000	1.000
*Transformational Leadership*Tenure*	1.000	1.000
Origin	1.000	1.000
Tenure	1.000	1.000

Source: Output SmartPLS 3.0 (2023).

Table 3. Direct test to hypothesis.

	Path Coefficient	Sample Mean (M)	Standart Deviation	T Statistic (IO/STDEV)	P Values
TL -> IWB	0.656	0.648	0.131	4.995	0.000
TL -> IC	0.664	0.667	0.091	7.327	0.000
IC -> IWB	0.388	0.394	0.178	2.175	0.030

Source: Output SmartPLS 3.0 (2023).

values > 0,500, implying that the measurement has met the convergent validity criteria and is declared valid.

A questionnaire is said to be reliable if Cronbach's Alpha and Composite Reliability values are greater than 0.700. To determine the consistency of respondents' answers, a reliability test was conducted. In Table 2, Cronbach's Alpha and Composite Reliability had a coefficient value greater than 0.700, indicating that respondents' responses were consistent and questionnaires were reliable.

Hypothesis test

Hypothesis testing is carried out through a direct effect significance test that aims to test out the effect of independent variables on the dependent variable. Hypothesis testing is carried out through two tests, among which are direct testing and indirect testing.

From Table 3 on the results of direct testing, it can be seen that hypothesis 1 (H1), hypothesis 2 (H2), and hypothesis 3 (H3) are accepted because P-Values value of 0.000 < 0.050. It means that both transformational leadership (TL)and innovation culture (IC)have an impact on Innovative Work Behavior (iwb). It also means that transformational Leadership (TL) has a positive effect on Innovation Climate (IC).

Table 4 shows the results of indirect testing that IC mediates between TL and IWB (*P* Value < 0.005), meaning that TL indirectly affects IWB through IC. In addition to mediation, this study also analyzes whether there is a moderator relationship. From the results of the study, it was shown that the location where the librarian worked (origin) did not moderate the difference between IC and IWB or TL and IWB (*P* Value

Table 4. Indirect test to hypothesis.

	Path Coefficient	Sample Mean (M)	Standart Deviation	T Statistic (IO/STDEV)	P Values
TL -> IC -> IWB	0.258	0.263	0.129	1.994	0.047
IC*Origin -> IWB	−0.383	−0.339	0.210	1.829	0.068
IC*Tenure -> IWB	0.286	0.342	0.258	1.107	0.269
TL*Origin -> IWB	0.191	0.190	0.195	0.981	0.327
TL*Tenure -> IWB	−0.435	−0.419	0.205	2.118	0.035

Source: Output SmartPLS 3.0 (2023).

> 0.005). Tenure also did not moderate between IC and IWB (*P* Value > 0.005). Table 4 also shows that tenure has a moderating effect between TL and IWB (*P* Value < 0.005) and has a negative direction, meaning that the longer the librarian works with a transformational leader, the less innovative he will be. This could be due to existing work routines or it could also be due to frequent changes in leadership at the public library service.

Discussion

The importance of increasing IWB in the librarians of the Regional Library Office has encouraged researchers to analyze the mechanisms that affect innovative work behavior among librarians. There are consistent literature gaps on what constitutes a mediating and moderating effect on the process of predicting innovative work behavior of librarians through various antecedents. This research analyzes the process of encouragement toward innovative work behavior of librarians through transformational leadership and innovation climate, and how the strength of the relationships from a multi-level interactionist perspective is determined. Researchers found that transformational leadership directly has a positive and significant effect on the innovative work behavior of librarians at the Malang Public Library, Gunung Kidul Public Library, and Yogyakarta Public Library. This finding is in line with previous research that found a direct positive relationship between transformational leadership and innovative work behavior (Afsar & Umrani, 2020a; Cerne, Penger, and Grah 2019; Saeed et al. 2019). Transformational leadership is also the most powerful variable that has a positive effect on innovative work behavior according to research by Afsar and Masood (2017).

Based on the results of the study, transformational leadership has a significant and positive direct influence on the innovation climate of librarians at the Malang Public Library, Gunung Kidul Public Library, and Yogyakarta Public Library. It can be stated that the higher the level of good transformational leadership, the better the innovation climate in librarians. This research was supported by Zuraik and Kelly (2018) and Zhang, Zheng, and Darko (2018) which found a positive and significant relationship directly between transformational leadership and innovation climate. Thus, it can be

concluded that good transformational leadership will be able to improve innovation climate.

Choi et al. (2016) conducted a study of 356 employees working in manufacturing companies in Korea and found that transformational leadership encourages innovative work behavior among employees. Innovation is a time-consuming and risky endeavor, according to Du, Kim, and Aldrich (2016), hence leaders must know when and how to provide the necessary support to improve the innovative performance of their members. According to Ma and Jiang (2018), transformational leaders encourage employee openness, experimentation and risk-taking behavior, which in turn encourages innovative work behavior in an organizational context.

From the results of hypothesis testing, it was also found that innovation climate has a significant and positive direct influence on innovative work behavior of librarians at the Malang Public Library, Gunung Kidul Public Library, and Yogyakarta Public Library. This shows that an increasingly innovative work environment will further increase innovative behavior in librarians. The results of this study are different from Bos-Nehles and Veenendaal (2017) which found a direct negative relationship between innovation climate and innovative work behavior. Previous research, Mesut et al. (2015) revealed that transformational leadership can empower members as well as create innovation climate in the work environment. Furthermore, Korku and Kaya (2022) revealed that when transformational leadership is included in the model separately through innovation climate, it can prove to affect innovative work behavior.

Innovation Climate (IC) is a climate that encourages employees to innovate and try new strategies in the organization (Soken and Barnes 2014). This is because innovation cannot be created in a climate that is contrary to creativity and innovation. In libraries, such climate are needed to introduce constructive ideas that are indispensable rather than simply adopting a reactive position to change. The creation of innovation climate in the library cannot be separated from the role of the librarian. Research by Kermani and Solhdoost (2017) suggests that there is a significant relationship between the innovative behavior of librarians and the innovation climate. Thus, it could be taken that the innovation climate can largely explain the ways and levels of organization to introduce innovation and encourage innovative work behavior.

Based on the results of the study, innovation climate was able to mediate the relationship between transformational leadership and innovative work behavior which obtained a significant and positive indirect influence on librarians at the Malang Public Library, Gunung Kidul Public Library, and of Yogyakarta Public Library. It can be stated that innovation climate strengthens the influence between transformational leadership and innovative work behavior. This research is supported by Zhang & Zheng (2018) and Afsar & Umrani (2020a) who found a positive and significant relationship indirectly between

transformational leadership and innovative work behavior through innovation climate. This is different from the research of Imran et al. (2019) which states that innovation climate is not able to mediate the effect of transformational leadership on innovative work behavior.

From the results of this study, it can be seen that leadership styles play an important role, where transformational leadership styles influence innovation climate and innovative work behavior. Martin (2016) revealed that strong and effective leadership is able to overcome the crisis to meet the demands of high change including in libraries. Afsar & Umrani (2020a) through their research revealed that In regards to transformational leadership, leadership styles that are able to give an innovative impact on individuals. Transformational leaders in libraries are portrayed as drivers in organizations that continue to engage in exchanges with library staff and create substantive change by developing potential through inspiration (Halaychik 2016). Leaders who adopt transformational leadership are able to develop members' potential to work through inspection, intellectual stimulation, and empowerment on impacting innovative work behavior, because leaders can directly influence members' creativity and performance (Jung 2001; Politis 2002). The findings of Lo et al. (2020) revealed that libraries that implement transformational leadership emphasizing significances in improving communication, building mutual trust and respect in library organizations to foster a motivated and innovative work environment for institutional progress.

Based on the Origin and Tenure control variables, the analysis found that the Origin control variables were unable to moderate the effect of transformational leadership and innovation climate on innovative work behavior, as it obtained an indirect and not significant, yet positive influence on the relationship between transformational leadership and innovative work behavior, as well as an indirect, not significant, and negative influence on the relationship between innovation climate and innovative work behavior of librarians at the Malang Public Library, Gunung Kidul Public Library, and of Yogyakarta Public Library. Meanwhile, in the Tenure control variable, it was found that Tenure was able to moderate the effect of transformational leadership on innovative work behavior, as there was a significant and negative indirect effect between the two. Furthermore, Tenure is also stated to be unable to moderate the effect of innovation climate on innovative work behavior, noting that there is an indirect, not significant, and positive influence between the two.

The results showed that the location of the library was not an obstacle or enabler for innovative behavior either in innovative environments or in the type of transformational leadership. This is because all of the locations refer to the same set of work environment, which is Law No. 43 of 2017 concerning libraries. Job characteristics that will affect innovative behavior (Bhatnagar 2012; Ohly and Fritz 2010; Setiawan et al. 2020) are not at the location of the

organization. The results showed that working duration would inhibit the innovative behavior of librarians in innovative environmental conditions. This variable has a certain appeals for further researches. From the survey, it could be taken that the librarians face the same day to day work routine, which may cause them to fall into a lack of enthusiasm and feel burned out, thus inhibiting their innovative behavior.

This research, apart from providing theoretical contributions, also has practical significance for librarians, individuals and academics. According to current research, organizations that do not focus on developing transformational leadership among librarians are less likely to see the emergence of innovative work behaviors. Based on the findings, transformational leadership has a positive effect on innovative work behavior. Thus, librarians can apply the essence of transformational leadership in an organizational context to increase librarians' innovative work behavior. Having responsibility as a leader is not an easy thing, a leader should be a role model in that environment. Gächter and Renner (2018) research shows that actions taken by leaders have the greatest direct impact in influencing employee behavior. Transformational leadership can stimulate librarians' innovative work behavior processes, especially at the idea creation stage (Al-Shammari and Khalifa 2019; Bysted and Jespersen 2014). Transformational leadership that inspires employees has an influence in stimulating employees' innovative work behavior (Setiawan et al. 2020).

Therefore, it is important for transformational leaders to understand the theoretical and practical relationships that exist between transformational leadership and innovative work behavior, especially among librarians. Leaders must provide librarians with autonomy, growth opportunities, and a variety of workplace skills to intrinsically motivate them to learn new things and increase their involvement in creative and innovative activities. Job autonomy is defined as the extent to which employees have great authority in their work schedules, choosing the equipment to be used, and deciding on the procedures to be followed (Garg and Dhar 2016). Thus, job autonomy can influence employees significantly, encouraging them to perform better at their workplace (Runhaar, Konermann, and Sanders 2013). Auh et al. (2011) noticed that individuals who experience high levels of job autonomy view their workplace and service climate in a more positive light. Innovative work behavior can be increased by inspiring librarians to try difficult tasks and not be afraid of the results of the ideas developed.

Managerial implications

This research, in addition to its theoretical contributions, has practical implications for librarians, individuals, and academics. According to current research, organizations that are not focused on developing transformational leadership among librarians are less likely to see the emergence of

innovative work behavior. Based on the findings, transformational leadership has a positive effect on innovative work behavior. Thus, librarians can apply the essence of transformational leadership in the context of the organization to improve the innovative work behavior of librarians. Transformational leaders provide intellectual material which encourage librarians to support each other in a new and different way to accomplish a task. As a result, it is critical for transformational leaders to understand the theoretical and practical relationships that exist between transformational leadership and innovative work behavior, especially in librarians. Leaders should give librarians autonomy, growth opportunities, and a variety of skills in the workplace to intrinsically motivate them to learn new things and increase their involvement in creative and innovative activities. Innovative work behavior can be greatly improved by inspiring librarians to try difficult tasks and not be afraid of the outcome of developed ideas.

Conclusion

Through the results of research and discussion, the conclusions was stated that Transformational leadership can increase innovative work behavior of librarians at three public library in Indonesia. Transformational leadership also shapes the innovation climate, which ultimately influences librarians' IWB in public library services. This study was limited to three public library locations; therefore, future research could utilize respondents from other regional library services or different types of libraries, such as university libraries.

To address concerns about causality, future researchers are encouraged to use longitudinal or experimental research designs. The use of individual-reported questionnaires raised concerns because informants were more likely to provide socially desirable answers than the most accurate answers. Further research in similar or different contexts around the world will improve the generalization of these findings. Although this study analyzed the transformational leadership climate of innovative work behavior, it did not account for many other leadership styles that could potentially improve librarians' innovative work behavior. Further research should look at how leadership styles can drive innovative work behavior. Furthermore, it is recommended to expand the scope of respondents and consider the role of personal or teamwork factors.
